## Chem 103 Basic Chemistry

Chapter 1  
Chemistry  
Basics

### What is Chemistry?

Chemistry is a science that deals with the study of matter and energy. Chemistry is concerned with the properties and behavior of matter, and how it reacts with other substances.

Chemistry is a science that deals with the study of matter and energy. Chemistry is concerned with the properties and behavior of matter, and how it reacts with other substances.

Chemistry is a science that deals with the study of matter and energy. Chemistry is concerned with the properties and behavior of matter, and how it reacts with other substances.

Chemistry is a science that deals with the study of matter and energy. Chemistry is concerned with the properties and behavior of matter, and how it reacts with other substances.

The main concepts are: 1) the connection between chemistry and the biochemists; 2) the role of chemistry in medicine; 3) the role of chemistry in society; and 4) the role of chemistry in science.

Methods of science used by chemists and biochemists. Chemistry is a major component of chemistry, including: 1) the role of chemistry in society and medicine as a basis for scientific research; 2) the role of chemistry in science as a basis for scientific research; and 3) the role of chemistry in science as a basis for scientific research.

What is the difference between chemistry and physics?

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

Chemistry deals with the study of matter and energy, while physics deals with the study of motion and force.

\* What is the definition of an acid (a base)?

Grading Scheme: Final grade will be computed based on the following items:

3 Exams

300

100 Comprehensive

Final

100\*

Lab

Note: Letter grades will be assigned based on the following scale: A = 90% and above; B = 80% and above; C = 70% and above; D = 60% and above; F = Below 60%. All letter grades will be converted to numerical values.
